Jon-

I sent an meeting invite this morning regarding our work in OK surrounding the flooding. Attached is a map that shows the impacted areas that have been assessed thus far. There are at least an additional 18 miles² impacted oil production areas that have not been assessed. There is a need to expand the assessment to determine the extent of impacts of discharged oil. In addition to providing you an update we want to determine a path forward for funding such an effort.

Chris – Here is a map for our discussion with Jon. I think we have 7 “known” tank batteries impacted in this path.

OCC may have mentioned an estimated volume, but none of their investigation reports for the sites they have visited have a volume.

I've attached the latest map. Shows spill pathway from northern most site (Hewitt Unit 15) to southern most site (Pinkston).

- Distance from Hewitt Unit to Pinkston = 9.34 miles
- Distance from Hewitt Unit to Love County line = 21.1 miles

The map has the township layers. I'll have to see if they can add a section layer as well.

I thought the OCC mentioned yesterday that tripledee had lost 300+ bbls?

Volume released from Tripledee is unknown. NRC have OCC investigation reports don't have volume numbers.

Thanks. That what I thought. If you add the volumes of oil, that'd give us a great metric for tomorrow. Basically 2443 bbl plus Ddd.

Good work today.

Subject: NRC's

Chris asked that we give him the number of NRC reports that would be included in a flood impacted zone. I can count 12 right now, but will double check in the morning.
